77,687 properties

HOW FRESH IS YOUR CONTACT DATA?

■ Under 1 year — 51,693 (36.4%) ■ 1–2 years — 12,555 (8.8%) ■ 2+ years — 77,687 (54.7%)

WHAT THIS MEANS

A high share of your dialed numbers are coming back as wrong numbers. These are usually stale records that a fresh skiptrace can recover — cleaning them up protects caller productivity and your connect rate. On top of that, a large share of your data is 2+ years old, so a refresh and a cleanup go hand in hand.

RECOMMENDED NEXT STEPS

- 1 Refresh your oldest records first.** The 77,687 properties with 2+ year-old data are the priority cohort — re-skiptracing these is where a fresh pull recovers the most reachable numbers.
- 2 Run a wrong-number cleanup.** 28,376 numbers (20.0% of your portfolio) are flagged as wrong. Submit the older ones to a fresh skiptrace and recycle the recovered numbers back into the dialer.
- 3 Put the 1–2 year band on a rolling refresh.** 12,555 records are approaching the stale window. Refreshing them on a regular cadence keeps your portfolio weighted toward higher-yield data.
