HOW FRESH IS YOUR CONTACT DATA?

WHAT THIS MEANS

Most of your numbers are now over a year old, and a large group is about to cross the two-year mark, where connect rates drop off. Refreshing before that wave hits keeps your reachable-number count high and your dialer productive.

RECOMMENDED NEXT STEPS

- 1 Put the 1-2 year band on a rolling refresh.** 429,088 records are approaching the stale window. Refreshing them on a regular cadence keeps your portfolio weighted toward higher-yield data.
- 2 Keep wrong numbers in check.** 16,044 numbers (3.0%) are flagged — a low rate. Periodically recycling them through a fresh skiptrace keeps caller productivity high.
- 3 Maintain your current refresh cadence.** Your contact data is in good shape. Keep your current cadence and we'll re-check the age profile in about six months.
