HOW FRESH IS YOUR CONTACT DATA?

■ Under 1 year — 21,911 (22.5%) ■ 1–2 years — 75,609 (77.5%) ■ 2+ years — 0 (0.0%)

WHAT THIS MEANS

A high share of your dialed numbers are coming back as wrong numbers. These are usually stale records that a fresh skiptrace can recover — cleaning them up protects caller productivity and your connect rate.

RECOMMENDED NEXT STEPS

- 1 Run a wrong-number cleanup.** 10,897 numbers (11.2% of your portfolio) are flagged as wrong. Submit the older ones to a fresh skiptrace and recycle the recovered numbers back into the dialer.
- 2 Put the 1–2 year band on a rolling refresh.** 75,609 records are approaching the stale window. Refreshing them on a regular cadence keeps your portfolio weighted toward higher-yield data.
- 3 Maintain your current refresh cadence.** Your contact data is in good shape. Keep your current cadence and we'll re-check the age profile in about six months.
